Abstract of the Disclosure

The invention relates to an inverse latex composition comprising: a) 50 to 80 weight % of at least one linear, branched or cross-linked organic polymer (P), b) 5 to 10 weight % of an emulsifier system (S1) of the water-in-oil (W/O) type, c) 5 to 45 weight % of at least one oil and d) 0 to 5 weight % of water. Said invention also relates to the preparation method and use thereof.
